                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3 STSAQFNKIPIELVIIVDHSMAKKCNSTATNTKIYEIVNSANEIFNPLNIHVTLIGVEFW 62                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    45 - DOMAIN: The agoest domain and the Teypel domains are important toward thereaselular matrix (By the actions the actions the actions the actions the action of the actions the action of the

-!- PTM: The precursor is cleaved by a furin endopeptidase (By similarity). -i- SIMILARITY: Belongs to peptidase family M128.
-i- SIMILARITY: Contains idsintegrin-like domain.
-i- SIMILARITY: Contains 6 TSP type-1 domains.
-i- SIMILARITY: Contains 1 FLAC domain.

-- CATALTIC ACTIVITY: Cleaves aggreean at the 1838-Glu-|-Ala-1839 established and versions at the 1845-Glu-|-Ala-1459 glu-|-CORACTOR: Stands I stand on per submit (By smalatity).
-- CORACTOR: Stands I stand on per submit (By smalatity).
-- SUBCELLULAR LOCATION: Secreted. Associated with the extracellular. and versican.

Name=2; Synonyme=Long: Igoli4e9P2N4-1. Sequence=VSP 007548, VSP 007549; Note=May result from the retention of an intron in the cDNA Lasting to a prematurate etop codon; =:- ALTERNATIVE PRODUCTS: EVENT-Alternative splicing, Named isoforms=3; Name=1, Synonyms=AbhNTS-9B; Isoid=G9P2N4-3; Sequence=Displayed; matrix (By similarity).

TRANSIS, SELECTION OF SELECTION

-i- PIM: The precursor is cleaved by a furin endopeptidase (By

similarik).

- SIMILARITY: Balongs to peptidase family MIZB.
-- SIMILARITY: Contains 1 disintegrin-like domain.
-- SIMILARITY: Contains 10 M domain.
-- SIMILARITY: Contains 15 TSP type-1 domains.

von Willebrand factor-cleaving enzyme, applicable in diagnosis of, and pupplementary therety for, thrombotic informboropenic puppra, and dover developing drugs for e.g. mycoardial infaction and carebral infaction N-PSDB, ABT32587.

Claim 4; Page 121-123; 144pp; Japanese

The invention comprises the amino acid and coding agentesce of a von Willebrand Scotor (very) -clearing arrayme. The DNA and procein sequences of the invention are useful. In the dispussion and treatment of cital interaction operations and treatment of cital interaction operations and treatment of cital and except a feet interaction are settled and the contraction of the interaction of the

New anti-anglogenic intestinal polypeptides, zdints polypeptides, which are mades of distincipglin proceases, for modulating extracellular matrix integraction, tumor supplession and wound healing.
                                                                                                                                            42 AAGGILHLELLUANGPDVPQAHQEDTERYVLTNLNIGAELLRDPSLGAGFRVHLVKWYIL 101
                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a human relief polypoptide. The diffits of properties is an anti-majogenic insertial polypoptide admiss is used for modificing extracellular matrix interactions. Edites polypoptide used to the control as a tool for identifying new faith, mambers of polypoptides. Editis polymorications are useful as probes of properties.
                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pineng, intitis met".edgements internal polypepte, yound bealings

polociding a purified human aggrecanase protein which can be used to 
develop inhibitors of aggrecanase.
